

High-Volume Faxing Made Simple.

eFax Developer is a cost-effective, secure and powerful XML-based fax service for businesses with high-volume fax environments. The eFax Developer API provides all the benefits of an in-house application faxing system without the labor or expense.

Sending Faxes

- ❑ To send a fax, your application will perform an HTTPS post (SSL encrypted) via XML containing the fax number and file (or files) to be faxed. eFax Developer will quickly acknowledge and deliver your fax request.
- ❑ Once the fax has been completed, the service will post back to your application with the fax results including: the transmission identifier, fax number, date/time of completion, fax status, recipient CSID, duration, number of pages, and number of retries. You can also separately perform a POST query at any time to retrieve the current status of any particular transaction.
- ❑ eFax Developer supports the following file formats: Microsoft Word/Excel, Adobe PDF, Plain Text, HTML and TIF Image files.

Receiving Faxes

- ❑ eFax Developer includes a toll-free, local, or international number for receiving faxes.
- ❑ When a fax is received, it will be delivered to your application as a PDF or TIF via a post method (HTTPS) which will include wrapper information, such as: the date/time of fax receipt, file type (PDF or TIF), number of pages, Caller ID, fax status, and other important data.

Receiving Faxes (with Bar-coding)

- ❑ Add bar-coding to your eFax Developer service for even more automation. When a fax is received, eFax Developer scans the barcode image, captures the data from within the barcode, and quickly delivers it back to your application via a post method (HTTPS) using XML. Contained within the XML Post are the actual fax (PDF or TIF image) and the wrapper containing the fax transmission metadata.
- ❑ eFax Developer also provides you access to a barcode creator that you can easily use to add barcodes to your faxes.

Archiving and Reporting

- ❑ Faxes can also be viewed, retrieved and/or resent via our secure online fax storage site. Access to our online administrative interface, will allow you to control your account settings and generate comprehensive usage reports.

eFax Developer Pricing

Our per-page rates include support and service, which can quickly scale to fit any volume without costly upgrades or maintenance. Please ask your sales representative about volume discounts.
